

■ Golden Hour (Project 911)

Official Comprehensive User Manual & Operations Guide

Golden Hour is a mission-critical Emergency Medical Response & Interoperability platform engineered around the vital first 60 minutes after trauma or acute onset. It synchronizes Citizens, Ambulance Pilots, Hospital Emergency Rooms, OPD Clinics, and Rural ASHA Sanginis in real time.

1. Direct APK Download & Installation

The application is distributed as a standalone **Android APK (.apk)**. No development environment or command-line setup is required for evaluation.

- **Step 1 — Download:** Tap the provided APK download link or scan the distribution QR code.
- **Step 2 — Install:** Open the downloaded APK on your Android device. If prompted, allow *'Install unknown apps'* in Android Settings.
- **Step 3 — Permissions:** On first launch, grant *'Precise Location (While using the app)'* to enable emergency proximity matching and live ambulance routing.

2. Quick Demo Credentials & Global Navigation

For seamless evaluator testing without entering passwords or OTPs, each login screen features an instant **1-Tap Quick Demo Button**:

Role	Route	1-Tap Demo Button	Pre-configured Identity
Citizen / Patient	/login	Explore as Demo Patient	Rahul Patel (+91 98765 43210, O+)
Ambulance Pilot	/driver-login	Quick Demo Pilot	Pilot Ramesh Kumar (UP-70-AMB-108)
Hospital ER Desk	/hospital-login	Quick Demo Hospital	Apollo Multi-Specialty / SRN Trauma
OPD Doctor	/doctor-login	Quick Demo Doctor	Dr. Ananya Sharma (OPD Clinic)
ASHA Worker	/asha-login	Quick Demo ASHA	Sunita Verma (ASHA Sangini Rural)

Role Selection & Navigation:

- **Entry Portal:** Choose between Patient, Hospital Staff, Ambulance Crew, Doctor, ASHA Worker, or Admin.
- **Trilingual Selector:** Tap Globe icon (top-right) to toggle between **English**, **हिन्दी** (Hindi), and **मराठी** (Marathi) in real time.
- **1-Tap Role Switch:** Tap < Back / Switch Role on the top-left of any dashboard to instantly change user roles during live evaluation.

3. Role 1: Citizen / Patient Emergency Console

Designed for rapid distress reporting with One-Tap SOS, Multimodal Gemini AI Triage, and live tracking.

Core Features & Operational Flow:

- 1. One-Tap SOS:** Prominent red button triggers automated dispatch. A 3-second safety window prevents accidental dispatches.
- 2. Voice AI SOS:** Tap the microphone to dictate emergency symptoms (e.g., *'Severe crushing chest pain radiating to left arm'*). A clinical validation layer distinguishes casual inquiries from acute trauma, ensuring only genuine crises dispatch ambulances.
- 3. False Alarm Cancellation:** Tap *'Cancel Emergency'* to safely recall dispatched units with zero penalty if triggered by accident.
- 4. Live Telemetry & GPS Tracking:** Real-time ambulance movement on Google Maps, pilot phone, vehicle number, and dynamic ETA.
- 5. Past Appointments Accordion:** Prior doctor consultations and electronic prescriptions are organized in an accordion to keep the dashboard uncluttered.
- 6. Medical Profile & ICE Contacts:** Pre-configured Blood Group, allergies, and chronic illnesses transmit automatically with the distress signal.

Multimodal Gemini Clinical AI Triage & ER Proximity Matching:

WHY CHOSEN:
Standard Emergency Outpatient & Minor Care

✓ 14 General Beds

✓ 5 ICU Beds Free

Auto-Failover Standby: Queued if primary ER reaches capacity.

AI VISUAL INCIDENT ANALYSIS

GENUINE SCENE VERIFIED

95% match

Genuine real-world photograph of a human hand.

OBSERVED TRAUMA FINDINGS:

- Small, dark linear mark on the palm consistent with a minor cut.
- No active bleeding or significant tissue damage observed.

IMMEDIATE FIRST-AID ACTIONS

✓ Clean the wound with soap and water

✓ Apply gentle pressure if any bleeding occurs

✓ Apply an antiseptic and sterile dressing

Proceed to Dispatch Confirmation --

View Full Hospital Match Details

Powered by Gemini Multimodal Clinical Triage - Golden Hour Network Protocol

Multimodal AI Clinical Analysis:

- **Visual Scene Verification:** Evaluates captured trauma photos (wound depth, active bleeding).
- **Immediate First-Aid:** Generates step-by-step emergency stabilization instructions.
- **Live ER Matching:** Ranks top 3 nearby trauma centers (e.g., *Jeevan Hospital, Medanta*) by general beds, ICU beds, and traffic ETA.

The image shows a very minor mark on the palm of the hand, consistent with a superficial cut. The patient is conscious, and there are no visible signs of active bleeding or deep injury.

OBSERVED TRAUMA FINDINGS:

4. Role 2: Ambulance Pilot / Driver Console

Empowers paramedics with audio dispatch alerts, on-scene arrival verification, and false-alarm protection.

Paramedic Mission Lifecycle:

- 1. Duty State:** Toggle between **ON DUTY** and **OFF DUTY**. The green badge confirms discoverability by the dispatch engine.
- 2. Emergency Acceptance:** High-priority dispatch cards present patient severity, distance, and ETA. Tap '**Accept Emergency**'.
- 3. Arrival at Patient Location:** Upon pulling up to the scene, tap '**Marked at Patient Location**'. This notifies both patient and ER desk that first responders are on site.
- 4. False Request Protection ('Patient Not Found'):** If the patient is absent or the call was fake, tap '*Patient Not Found / False Request*'. The mission closes safely with status FALSE_ALARM without penalizing the driver.
- 5. Patient Onboard & Hospital Transfer:** Once stabilized inside the ambulance, tap '*Patient Onboard* → *En Route to Hospital*'.
- 6. Trauma Bay Handover:** At the ER entrance, tap '*Complete Handover & Trip*' to transition clinical custody.

Emergency GPS Navigation & Hospital Coordination:

- Calibrates dynamic driving route to the nearest verified emergency hospital (e.g., *Apollo Hospital ER*).
- Displays live hospital metrics en route: **18 free beds, 4 ICU beds**.
- 1-Tap buttons to launch native **Google Maps Turn-by-Turn Voice Navigation** or **Direct Call to Emergency Desk**.

5. Role 3: Hospital ER Command Center & Capacity Desk

Provides trauma triage, dynamic bed/ICU capacity management, and doctor/ASHA referral processing.

Emergency Room Operations:

- 1. Live ER Dashboard:** Apollo Multi-Specialty Hospital ER console tracking critical cases, free general beds, and free ICU beds.
- 2. Trauma Bay Readiness:** Monitors active trauma bays and on-call trauma surgeons in real time.
- 3. Linked Fleet & Drivers:** Tracks inbound affiliated ambulances transporting acute patients.
- 4. Inbound Ambulance Bed Reservation:** Pre-arrival vitals streaming enables staff to tap 'Reserve Bed', guaranteeing ready trauma bays upon vehicle arrival.
- 5. Doctor & Community Referrals Hub:** Separate tab for incoming doctor clinic and rural ASHA referrals.
- 6. Unread Notification Bell:** Header bell displays a red '1' badge on incoming referrals. Tapping it opens the referral queue and resets the badge to 0.

Live Bed Ledger & Emergency Drug Stock:

- **Ward Beds (22/30):** 1-Tap -1 Bed (Admit) and +1 Bed (Discharge) buttons.
- **ICU Units (4/6):** 1-Tap -1 ICU (Occupy) and +1 ICU (Free) buttons.
- **Emergency Drug Stock:** Live inventory tracking for life-saving drugs (Adrenaline, Aspirin, Atropine, Insulin, Normal Saline).

6. Role 4: Doctor OPD Clinic & Teleconsultation

Streamlines outpatient queue management, electronic prescriptions, and emergency hospital referrals.

OPD Queue & Consultation Workflow:

- 1. Live Queue Management:** Displays today's patient queue, active tokens, and waiting room count. Tap **'Call Next Patient'** to advance.
- 2. Clinical Consultation Modal:** Select standard primary diagnosis (e.g., *Acute Angina*, *Hypertension*) and record vitals (BP, Heart Rate).
- 3. Digital Prescription (Rx):** Add standard medications with dosage, frequency (1-0-1), and duration.
- 4. Hospital Referral Toggle:** If the patient requires emergency admission, switch **'Refer Patient to Hospital'** to ON. Choose destination hospital, priority (**HIGH / NORMAL**), and clinical reason.
- 5. Instant Transmission:** Tapping **'Save Record, Prescribe & Call Next'** transmits the referral directly to the hospital ER console.

7. Role 5: ASHA Sangini / Rural Frontline Worker

Brings tertiary emergency healthcare to remote villages with point-of-care screening, AI triage, and offline sync.

Grassroots Community Healthcare:

- 1. Village Directory:** Manages 13+ rural patients (high-risk pregnant: mothers, hypertensive elderly, infants).
- 2. Home Visit Logging:** Screen vitals at the patient's doorstep: Blood Pressure, Pulse, SpO2, and Blood Sugar.
- 3. Dual-Language AI Guidance:** Immediate clinical triage advice in simple Hindi & English (e.g., "■■■■ ■■■■ (HIGH): ■■■■ ■■ ■■■■ ■■■■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■■ ■■ ■■■■ ■■■■■■■■ ■■■■■■■■").
- 4. Digital Frontline Referral:** Transmit referrals to Swaroop Rani Nehru Hospital or Naini PHC with a unique code (e.g., REF-ASHA-XXXX).
- 5. 100% Offline Resilience:** Operates without cellular coverage. Submissions queue locally and auto-synchronize to Firestore once reconnected.

8. Role 6: Medical Administrator & Citywide Network

Provides centralized credential verification, facility licensing audits, and citywide pharmacy availability.

Administrative Verification Desk:

- **Credential Auditing:** CMO verification desk for onboarding doctors, hospitals, and ambulance units.
- **Approve / Reject:** Verify medical licenses, facility addresses, and ICU capabilities before approving consoles.
- **Citywide Pharmacy Stock:** Live multi-hospital stock availability for critical medicines (Aspirin, Insulin, Antibiotics) across SRN, Medanta, and MLN hospitals.

9. Evaluator Troubleshooting & Test Matrix

Scenario / Issue	Root Cause	Recommended Action
Referral not visible on hospital desk	Viewing wrong tab or cached state	Switch to the ' Doctor / Community Referrals ' tab and pull down from top to refresh the list.
Bell icon badge stuck at 1	Referrals list not opened yet	Tap directly on the Bell Icon in the header. It opens the referrals screen and resets the badge to 0.
Location permission alert appears	Device GPS was disabled	Grant ' <i>Precise Location While In Use</i> ' in device settings to enable real-time routing.
Testing without internet	Simulating remote rural village	Use ASHA or Driver mode freely; all records save locally and automatically sync when Wi-Fi/data returns.
Switching between roles rapidly	Testing all roles on single device	Tap Back / Switch Role at the top-left of any dashboard to instantly change roles without logging in again.

Golden Hour (Project 911) bridges the critical divide between distress calls and hospital doors. Through coordinated AI triage, live hospital bed synchronization, driver false-alarm protection, and rural ASHA connectivity, the platform ensures that no life is lost due to delays during the golden hour.
