

■ Golden Hour (Project 911)

Complete End-to-End User Manual & Operations Guide

Golden Hour is a mission-critical Emergency Medical Response & Interoperability platform designed around the vital first 60 minutes after trauma or acute onset. It seamlessly connects Citizens, Ambulance Pilots, Hospital Emergency Rooms, OPD Doctors, and Rural ASHA Sanginis in real time.

1. Standalone APK Download & Installation

Golden Hour is distributed directly as an optimized, standalone **Android APK package (.apk)**. There is no requirement to install development tools or node packages.

- **Step 1: Download APK:** Tap the provided APK download link or scan the distribution QR code.
- **Step 2: Install Package:** Open the downloaded file on your Android device. If prompted by Android security, enable *'Install unknown apps'* for your browser.
- **Step 3: Launch:** Tap the Golden Hour icon on your home screen or app drawer.
- **Step 4: Location Access:** On the first prompt, select *'While using the app'* to enable live emergency matching and GPS ambulance telemetry.

2. Quick Demo Credentials & Role Switching

For immediate evaluation and live demonstration without manual registration or OTPs, each login screen provides a dedicated **1-Tap Quick Demo Button**:

Role	Route	Demo Button	Pre-loaded Identity
Citizen / Patient	/login	Explore as Demo Patient	Rahul Sharma (+91 98765 43210, O+)
Ambulance Pilot	/driver-login	Quick Demo Pilot	Rajesh Kumar (Ambulance UP-70-EMG-108)
Hospital ER Desk	/hospital-login	Quick Demo Hospital	Apollo Multi-Specialty / SRN Trauma
OPD Doctor	/doctor-login	Quick Demo Doctor	Dr. Priya Sharma, MD (Civil Lines Clinic)
ASHA Worker	/asha-login	Quick Demo ASHA	Sunita Verma (ASHA Sangini Rural)

- **Trilingual Switcher:** Tap the Globe icon in the top-right corner to toggle between **English**, **हिन्दी (Hindi)**, and **मराठी (Marathi)** instantly.
- **Instant Role Switching:** Tap **◀ Back / Switch Role** on the top-left of any dashboard to switch between user roles in 1 tap.

3. Role 1: Citizen / Patient Emergency Portal

Designed for high-stress situations with instant response, clinical verification, and live tracking.

- Key Features & Workflow:**
- 1. One-Tap SOS:** A prominent pulsating red button. Once triggered, a 3-second safety window allows cancellation of accidental touches before dispatching.
 - 2. Voice AI Emergency SOS:** Tap the microphone to dictate symptoms (e.g., 'Severe crushing chest pain radiating to left arm'). A clinical validation layer distinguishes between casual medicine questions and genuine trauma, ensuring emergency services are never dispatched falsely.
 - 3. False Alarm Cancellation:** Tap 'Cancel Emergency' and select a reason to recall units immediately with zero penalty.
 - 4. Live Telemetry & Tracking:** Once accepted, view the approaching ambulance on a live map, driver details, and traffic-aware dynamic ETA.
 - 5. Past Appointments Accordion:** Previous clinical consultations and digital prescriptions are neatly collapsed into a clean dropdown to keep the screen uncluttered.
 - 6. Medical Profile:** Pre-configured Blood Group, allergies, and chronic conditions are automatically sent with the SOS alert.

4. Role 2: Ambulance Pilot / Driver Console

Empowers paramedics with high-priority proximity dispatches, GPS routing, and patient status transitions.

Paramedic Operations Lifecycle:

- 1. Duty State:** Toggle between **ON DUTY** and **OFF DUTY**. When green, the vehicle is discoverable by the dispatch engine.
- 2. Instant Dispatch Alert:** Audio chime sounds with a dispatch card indicating patient severity, distance, and ETA. Tap '**Accept Emergency**'.
- 3. Arrival at Patient Location:** Upon arriving at the coordinates, tap '**Marked at Patient Location**'. This alerts both patient and hospital that first responders are on-scene.
- 4. False Request Protection ('Patient Not Found'):** If the patient is missing or the call was prank/false, tap '*Patient Not Found / False Request*'. The trip safely terminates as FALSE_ALARM without driver penalty.
- 5. Patient Onboard & Hospital Handover:** Stabilize the patient, tap '*Patient Onboard → En Route to Hospital*', and upon reaching the trauma bay, tap '*Complete Handover & Trip*'.

5. Role 3: Hospital ER Command Center & Capacity Desk

Provides real-time visibility over bed capacities, incoming ambulance trauma, and doctor/ASHA referrals.

Emergency Room Desk Functions:

- 1. Dynamic Bed & ICU Management:** Under the 'Capacity' tab, update Available General Beds, ICU Beds, and Ventilators in real time.
- 2. Inbound Ambulance Triage:** Incoming ambulances display patient vitals pre-arrival. Tap 'Reserve Bed' to allocate trauma bay capacity.
- 3. Doctor & Community Referrals Hub:** Switch between [Emergencies] and [Doctor / Community Referrals]. New referrals illuminate an unread red '1' badge on the header bell icon.
- 4. Bell Badge Clear:** Tapping the bell icon instantly opens the referrals queue and clears the badge to 0.
- 5. Complete Admission → Discharge Lifecycle:**
 - **Accept:** Tap 'Accept & Reserve Bed' (Holds 1 bed).
 - **Admit:** Tap 'Patient Arrived / Admit'.
 - **Discharge:** Tap 'Discharge & Free Bed' (Releases the held bed back into available capacity).

6. Role 4: Doctor OPD Clinic & Teleconsultation

Streamlines outpatient clinic queues, digital prescriptions, and emergency referrals to tertiary hospitals.

Clinical OPD Consultation Flow:

- 1. Live Token Queue:** View queued patient tokens under /queue. Tap '**Call Next Patient**' to begin consultation.
- 2. Digital Prescription & Diagnosis:** Select conditions (e.g., *Acute Angina, Typhoid*), record vitals (BP, Pulse, SpO2), and prescribe standard medicines with dosages (1-0-1).
- 3. Hospital Referral Toggle:** If the patient requires critical care, toggle '**Refer Patient to Hospital**' to ON. Select the hospital, priority (**HIGH / NORMAL**), and clinical reason (e.g., '*Urgent ICU & Cath Lab needed*').
- 4. Instant ER Dispatch:** Tapping '*Complete Consultation*' saves the electronic health record and automatically transmits the referral to the hospital desk.
- 5. Teleconsultation:** Real-time HD audio/video consultation with remote rural patients with built-in in-call clinical notes.

8. Troubleshooting & Evaluation Guide

Quick reference guide for test scenarios and evaluation checks:

Scenario / Issue	Root Cause	Recommended Action
Referral not visible on hospital desk	Viewing wrong tab or cached state	Ensure you are on the 'Doctor / Community Referrals' tab. Pull down from top to refresh the list.
Bell icon badge stuck at 1	Referrals list not opened yet	Tap directly on the Bell Icon in the header. It opens the referrals screen and resets the badge to 0.
Location permission alert appears	Device GPS was disabled	Grant <i>'Precise Location While In Use'</i> in device settings to enable real-time routing.
Testing without internet	Simulating remote rural village	Use ASHA or Driver mode freely; all records save locally and automatically sync when Wi-Fi/data returns.
Switching between roles rapidly	Testing all roles on single device	Tap ⏮ Back / Switch Role at the top-left of any dashboard to instantly change roles without logging in again.

Golden Hour (Project 911) bridges the critical divide between distress calls and hospital doors. Through coordinated AI triage, live hospital bed synchronization, driver false-alarm protection, and rural ASHA connectivity, the platform ensures that no life is lost due to delays during the golden hour.
